

Profile

Company Profile

DC Concept

DC Concept is a young, progressive and dynamically developing company, founded in 2000 by a group of experts with many years of experience in information technology.

DC Concept ranks among the top Central European software developing companies. Among its products are several top object technologies. With these technologies, DC Concept sets new progressive trends in the development of multi-tier object database applications.

The approach to the software development in DC Concept can also be expressed like this:

*"We look at things from a different, unusual angle.
We search for ways where others don't."*

An actual result of this innovative approach is the QI First Elastic Information System. QI is an object multi-tier database system with integrated CASE tool for development and modification of the applications – QI Builder. It was first developed in 1996. Its first installation for a customer was in 2001. Since then, hundreds of licenses have been provided. As compared to the best contemporary development tools of the top companies worldwide, the database applications are usually developed about eight times faster with the help of the QI Builder.

The QI is a multilingual system and it respects multiple legislations in several markets. Further languages as well as legislations are being gradually applied to the new markets. QI is the first product that can really be applied to either small or large customers. For all categories of customers, its elasticity conforms to the needs in technology, applications and also to business policy.

QI - The First Elastic Information System

The QI information system is absolutely unique with its overall concept as well as high concentration of top technology. The high level of entire QI system modularity predetermines it to be easily used in various industrial branches as well as specific areas of enterprise.

The QI system can be a simple to use information system for the trade organizations as well as a robust tool for medium-sized manufacturing company management. It can also be applied as an extensive custom modification for large organizations or government administration.

To the QI system applications, many categories can be assigned - ERP, CRM, SCM, e-applications, APS and others. Its elasticity and modularity is applied also in separate small applications e.g. for process management or document flow. Solutions based on the QI system cover all the usual activities within a company. The most often used applications are: Bookkeeping, Finance, Purchase and Sale, Stock Management, Marketing and CRM (Customer Relationship Management), Human Resources and Pays, Organization and Management, Assets, Service and Production and Forwarding. The list is, due to the integrated development tool, extended without restraint by other fully integrated specialized applications.

The main advantage of the QI system is the possibility to flexibly react to the changes running inside and outside the organization and easily conform to them during the run of the system, technologically as well as in the field of licensing. Due to its unique properties it is being called elastic.

The users can communicate with the QI in several worldwide languages simultaneously. All the applications can be operated in Windows as well via the Internet. This predetermines the QI system to be also used as an ASP solution. QI allows the distributed data processing as well, e.g. on remote workplaces. It also supports the transfer of electronic documents by e-mails or data exports/imports in various formats (XML...).

License Policy and Implementation of QI

DC Concept provides the same elasticity the customer is provided within QI in view of its functionality within the license policy. The functionality used can be extended or reduced at any time so that the customer pays for the applications it actually needs. For optimum financing method of QI, there is a large set of payment modes ready to conform to the financing intentions to finance the company system by various methods including diversification of the financing into longer time periods.

Partner network

DC Concept creates and coordinates a supra-national network of partners that take part in localization, development, support and implementation of the system in various language and legislative environments.

The QI information system is only implemented for the customers by certified partners that are regularly trained and tested. As a result of this approach, the product is being provided and services are provided professionally.

DC Concept also coordinates the developer network aimed to the development and implementation of QI applications in specific fields of application like the special types of production, power distribution, transportation, forwarding and others.

DC Concept intensively and systematically works on further development of the partner network inland as well as abroad. Our priority is to build firm and professional partnership relations based on mutual reliance.
